

LIGHT UP YOUR WORLD with Aurora Zone

Planet Earth is full of natural wonders and catching a glimpse of the Northern Lights is one of those magical experiences that will stay with you forever. Ancient cultures viewed the Northern Lights as signs from a goddess or a fallen warrior, foxes, and lingering spirits of the dead. Modern science has classified them as an interaction of electronically charged particles in our atmosphere. With the 2022 season predicted to be an unprecedented year for solar activity, there has never been a better time to tick the Northern Lights off your bucket list.

Iceland

Iceland is an island resting on the meeting point of two tectonic plates: a fusion which also extends to its culture. Glaciers exist side by side with volcanoes. Ancient glacier ice melts with cutting-edge hydroelectric power stations. Marry your exploration of Europe's last wild frontier with luxurious spa experiences in thermal blue lagoons and the new sky lagoon, with extended views over the Atlantic Ocean.

Finland

If mentions of Lapland bring to mind package holidays for small children seeking a jolly gentleman in a red suit, The Aurora Zone's

holidays to Finnish Lapland are a lot more adult. With adventurous sports like snowmobiling and skiing, husky safaris or reindeer sledding with a sauna to warm you back up again at the hotel.

Sweden

Herding reindeer, driving a pack of huskies across a frozen lake, or snowmobiling across snow, or cooking a meal of foraged food in the wild with our guides. If you're craving some adventure with your winter break, Swedish Lapland is much more than a long weekend and we're sure a night in a treehouse will thrill guests of all ages.

Norway

See it all in Norway on one of our Northern Lights trips, combine exciting excursions with the luxury of a Radisson Blu Hotel and have plenty of time to take in the sights. Watch the Northern Lights mirrored in the flat calm waters on an evening cruise excursion or venture out to the isle of Sommarøy and walk on the white beaches. Northern Norway is a land of towering mountains, fathomless fjords, and remote locations, perfect for viewing the night sky without light pollution. ■
